## *NHIS Medicines List*

**Effective October 2009**

This is a revised version of the NHIS' Medicines List. The original list of medicines in this schedule was developed using a process that involved evaluation of evidence for the management of health problems commonly seen at health facilities in Ghana. A Specialists Group comprising medical doctors, pharmacists and a midwife reviewed the evidence for the management of the health problems and selected the appropriate medicines. A Core Group assisted the specialists in the selection of medicines and did the final review of the selected medicines. The current list is expanded to include medicines and formulations suggested by stakeholders.

## Methodology

---

A national survey of medicine prices was also undertaken using the methodology of the World Health Organisation and Health Action International (HAI). Pricing data was collected from manufacturers, wholesale distributors, private pharmacies, government, mission and private health facilities located in all the ten (10) regions in the country.

The purpose of the survey was to capture the prices of the selected medicines as obtained in both the public and private sectors. For each formulation, prices for the innovator medicine (brand) and the most sold generic equivalent were collected as recommended by the World Health Organisation and Health Action International. The prices provided are those agreed upon by the NHIA and all stakeholders.

The reviewed medicines list contains a total of 565 formulations. Majority of 87 formulations currently not on the Medicines List but in the Standard Treatment Guidelines (STG) would be added once the STG review is completed.

## Stakeholders' Meetings

---

NHIA has always emphasized the importance of involving stakeholders in the review of Medicines List. Stakeholder meetings were held where the list of medicines was presented for comments and inputs. Stakeholders were given the opportunity to compare NHIA proposed prices with prices submitted by stakeholders from similar pricing surveys.

## Exclusions

---

The development of the list concentrated on diseases covered by the benefits package. The list does not include diagnostic kits. General anaesthetic agents were excluded because they are part of the tariffs.

## Exemptions

---

Currently there are some health services that are exempted from payment of fees. These include childhood immunizations, tuberculosis, delivery care and mental health care. Medicines used in mental health, for example, may be used at mental health institutions as well as in general practice. Such situations should be recognized and appropriate interventions instituted to prevent confusion in claims management.

## Medical Devices and Supplies

---

It is important to stress that some of the medicine formulations on the list require medical devices and disposable supplies for use. Some of these devices include insulin syringes, spacers and inhalers, oxygen masks, nebulisers and infusion pumps.

## How to use this document

---

The medicines on this list are described in their **Generic** or **International Non-proprietary Names** and include the **dosage form** and **strength**. For example: *Paracetamol Tablet, 500mg*. The proprietary names of very few medicines are used as the 'generic' name as a result of long standing common usage, for example, *Aspirin Tablet* instead of *Acetyl Salicylic Acid Tablet*. Medicines should be prescribed by the names on this list. Personal abbreviations of names of medicines must be avoided, for example, **P'mol for paracetamol** would not be accepted.

**The Unit of Pricing** column provides information on the basis of the price quoted in the **Price** column. Examples of the units of pricing are tablet, capsule, suppositories, pessaries, vial, ampoules, weight (for creams, ointments, granules etc), and volume (for liquids). It is important that prescribers indicate the quantity of medicines to be supplied on the prescription. This is a normal requirement for prescribing and will be very helpful in assisting Claims Managers in estimating amounts to be reimbursed.

A prescription for two (2) Paracetamol Tablet, 500mg to be taken three times a day for 3 days must indicate the quantity to be supplied as 18 (6 tablets a day for 3 days). Thus the reimbursed amount will be the price of one tablet of paracetamol (0.01 cedis) multiplied by 18, which is  $18 \times 0.01 \text{ cedis} = 18 \text{ Ghana pesewas}$ . This basic principle can be applied to all the medicines. Be aware that for those medicines used as part of procedures the tariffs developed for the procedures include the cost of the relevant medicines.

Particular attention should be paid to the unit of pricing in calculating the cost of medicines supplied. Where a unit of pricing is stated as a course by volume, the price indicated is for the whole course, not a tablet or ml.

Examples:

<b>Code</b>	<b>Generic name, dosage form, strength</b>	<b>Unit of Pricing</b>	<b>Price</b>
AMOARTTA1	Amodiaquine + Artesunate Tablet, 150 mg + 50 mg (12 tabs)	1 Course	4.00
ALUHYDMI1	Aluminium Hydroxide Mixture	100 ML	2.00

## Prescribing Guidelines

---

All NHIS prescriptions should be written on approved prescription forms and in approved formats<sup>1</sup>. Only medicines on the NHIA Medicines List shall be permitted for re-imburement.

---

<sup>1</sup> Standard nationally applicable NHIS prescriptions forms will be designed subject to approval by the NHIS Council who shall produce and distribute them.

The following, working in accredited health facilities, are currently authorised to prescribe medicines: Medical practitioners, Dentists, Midwives, Medical Assistants and Nurses in special fields.

Prescriptions should fulfil the following requirements

All prescriptions should be in conformity with Ghanaian laws including the Pharmacy Act 1994 (Act 489), the Medical and Dental Council Decree 1972 (NRCD 91) and the Nurses and Midwives Decree 1972 (NRCD 117)

- All prescriptions should be written legibly in ink or otherwise so as to be indelible
- All prescriptions should be written by the prescriber and not left for another person to complete
- All prescriptions should be dated
- All prescriptions should state the full name and address of the patient
- All prescriptions should specify the age and weight (in the case of children) of the patient being treated
- All prescription should state the diagnosis being treated

The prescription should contain the following

- Dosage form, generic name of medication, strength, dose and dosage schedule
- Exact quantity of medication to be supplied
- All prescriptions should be signed in ink by the prescriber
- All prescriptions should have the name, professional address and if possible telephone number of the prescriber
- ***Only accredited providers shall prescribe for dispensing under the NHIS.***

# Dispensing Guidelines

---

The dispensing of all prescriptions under the NHIS must be carried out either by a pharmacist or under the direct supervision of a pharmacist who is aware of what is going on and can intervene, if necessary.

## The Prescription

---

- The dispenser should ensure that the prescription is legally valid
- The dispenser should assure himself/herself that the prescription is genuine and has not been altered after issuing
- The patient's age, if a child should be confirmed.
- The dispenser should ensure that the items on the prescription can be prescribed under the NHIS i.e. they are on the NHIS Medicines List
- Each medicine on the prescription should contain the following
- Dosage form, generic name, strength, dose, dosage schedule and quantity of medication to be supplied
- The dispenser should check the pharmaceutical and therapeutic appropriateness of the prescription. In particular;
- The dispenser should assess the prescription for validity, safety and clinical appropriateness.
- The dispenser should ensure that the dosage form and route of administration are appropriate according to the patient's gender, age and clinical condition.
- The dispenser should ensure that the prescribed medicines are compatible with other medications (prescribed or bought over-the-counter) or others that the patient may be taking.
- The dispenser should contact the prescriber if any details are missing, incorrect or ambiguous or if forgery or fraud is suspected.

# Labelling

---

Each dispensed medication should be appropriately packaged and adequately labelled with the following minimum information:

- Name of the patient
- Generic name of the drug
- Strength of the active ingredient
- Quantity of dispensed product
- Complete dose regimen in written and/or graphic form
- Duration of use
- Name and address of the dispensing facility and dispenser
- Special instructions
- Date of dispensing

**Local Codes (Nine Alpha-numeric Characters) - Main or Operational Codes, Unique to product**

---

A system of classification based on the first six characters of the generic name of the medicine (with variations), formulation and strength was designed to provide each medicine on the NHIA medicines list a unique identity. Where there is more than one strength of the same formulation, the medicine's code was arranged numerically in ascending order. The code generated for each medicine item was limited to a fixed length of NINE alphanumeric characters<sup>2</sup>. In designing the codes consideration was also given to the practicality of filling forms within diverse health institutions public and private and with different staff strengths and capabilities.

For example, Paracetamol Tablet, 500mg will have the following code:

P	A	R	A	C	E	T	A	1
---	---	---	---	---	---	---	---	---

Column 1-6	First six characters of generic name e.g. <b>PARACE</b> tamol
Column 7-8	First two characters of formulation e.g. <b>Tablet</b>
Column 9	Numerical designation for strength e.g. <b>1</b> for 500mg as opposed to <b>2</b> for 1000mg

Exceptions to 'First 6 character' rule apply when the generic name of the medicine is made up of two or more words.

Where the generic name has two words the first three characters of each word are joined for columns 1-6

For example, Magnesium Trisilicate Tablet, 500mg

M	A	G	T	R	I	T	A	1
---	---	---	---	---	---	---	---	---

Column 1-6	First three characters of first word of the generic name e.g. <b>MAG</b> nesium and the first three characters of <b>TR</b> isilicate
Column 7-8	First two characters of formulation e.g. <b>Tablet</b>
Column 9	Numerical designation for strength e.g. <b>1</b> for 500mg

Where the generic name has three words the first two characters of each word are joined for columns 1-6

For example, Magnesium Trisilicate + Aluminium Hydroxide Mixture

---

<sup>2</sup> The length of NINE alphanumeric characters was agreed on by the company designing the NHIA IT solution, the IT Department of the NHIA and the Research and Development Department of the NHIA and other senior managers of the NHIA.

M	A	T	R	A	L	M	I	1
---	---	---	---	---	---	---	---	---

Column 1-6	First two characters of first word of the generic name e.g. <b>MA</b> gnesium, the first two characters of <b>TR</b> isilicate and the first two characters of <b>AL</b> uminium
Column 7-8	First two characters of formulation e.g. <b>Mi</b> xture
Column 9	Numerical designation for strength e.g. <b>1</b>

The TWO character designation for the dosage forms are given in Table 1.

**Table 1** Abbreviations for dosage forms used in the coding

CA=CAPSULES	OG=ORAL GEL	Also note that where two words describe the dosage form the initials are used.  <b>NB: Eye Drop is coded ID to distinguish it from Ear Drops ED</b>
CR= CREAM	OI= OINTMENT	
DT=DISPERSIBLE TABLET	PO=POWDER/GRANULES	
DR=DROPS	RE=RECTAL (Suppository)	
ED=EAR DROPS	RS=RECTAL SOLUTION (RECTAL TUBES)	
EL=ELIXIR	SH=SHAMPOO	
EO=EYE OINTMENT	SP=SPRAY	
GA=GASEOUS	SU=SUSPENSION	
GE=GEL	SY=SYRUP	
<b>ID=EYE DROPS</b>	TA=TABLET	
IN=INJECTION	TD=TABLET DISPERSIBLE	
LI=LIQUID	VC=VAGINAL CREAM	
LO= LOTION	VP=VAGINAL (PESSARY, TABLET, CAPSULE)	
MI=MIXTURE		
MW=MOUTH WASH		
ND=-NASAL DROPS		

A few of the medicines with identical codes have had the principle of the first six characters modified in order to avoid confusion. Identical codes occur when:

medicines appear under more than one therapeutic class

the first six characters of a medicine name and the dosage form are identical, for example:

Chlorpromazine and Chlorphenamine Tablets changed to CHLPRO AND CHLPHE respectively;

Diethylcarbamazine and Diethylstilbesterol Tablets changed to DIECAR AND DIESTI respectively;

Streptomycin and Streptokinase Injections changed to STREPT (maintained) AND STRKIN respectively and

Tetracycline and Tetracaine Eye drops = TETRAC AND TETCAI

## List of Medicines
